Final set of Good Practices

GP1: Identify and report
by-catch NIS information

GP2: Use reference protocols
for NIS data collection

GP3: Integrate citizen science
and local ecological knowledge

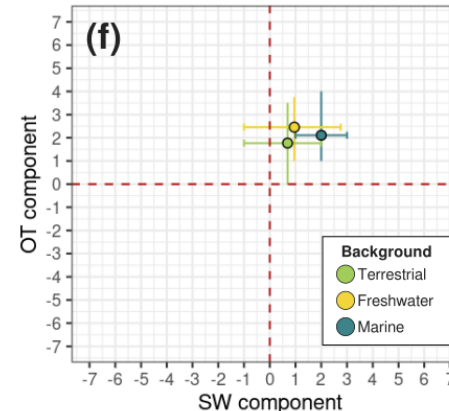

GP4: Share and promote NIS data
using Open and FAIR practices

GP5: Archive NIS (meta)data
into open-access repository

GP6: Enhance public
communication of NIS data

USEit
Let's use the aliens

Biological invasions represent today one of the greatest threats to global biodiversity, with negative impacts on human health and the economy of our country. The USEit project addresses this problem by involving a number of marine and terrestrial institutes of the National Research Council of Italy (CNR). Our main goal is to empower the scientific research on invasive species and to transform this challenge into new opportunities and new growth strategies.

Title

Distribution and abundance of Anadara spp. in the Northern Adriatic Sea from 2008 to 2023

Abstract

This dataset includes 1,998 records with distribution and abundance information of the invasive species *Anadara kagoshimensis* and *A. transversa*. Sample collection occurred at 66 trawling stations located in the Italian waters of the Northern Adriatic Sea within the framework of the SoleMon project (CNR-IR-BIM) between 2008 and 2023. The dataset was compiled, harmonised and published within the CNR project USEit - Using operational synergies for the study and integrated management of invasive alien species in Italy.
